To whom it may concern,

All Eurocylinder Steel SCUBA Diving Cylinders supplied by Beaver Sports (Yorks) Ltd. have been cleaned for the use with Nitrox and Oxygen by Eurocylinders AG at the time of production and a sealing cap fitted.

Should any Eurocylinder Steel SCUBA Diving Cylinder be used for gas containing more than 23 % oxygen, all other components of the cylinder, including the valve, regulator and the filling system, must also be Oxygen cleaned. Strictly avoid any contamination with dust, grease, silicones or oils.

If you are not sure about the status of any particular cylinder, or the sealing cap is missing, it should be freshly Oxygen cleaned by Dive Centre Professionals.

It is at the point of when a combined cylinder and valve is assembled after Oxygen cleaning that any required certification may be issued by the relevant trained and certified technician.

A handwritten signature in black ink, appearing to read "P.M. Walker", with a long horizontal line underneath it.

Martin Walker
